Summary

Junior Java Developer building full-stack applications with **Spring Boot**, **React** and **PostgreSQL**. Delivered **3 microservices** and **93 REST endpoints** during a Java Full-Stack internship at Infosys Springboard, later secured with **JWT**. Built and deployed 2 projects, including a payment-recovery platform with **241 automated tests**.

Education

R.M.D. Engineering College (Autonomous) **2024 – 2028**
Bachelor of Engineering in Electronics and Communication Engineering CGPA: 8.02 / 10 *Chennai, India*

Sri Venkateshwara Matric Hr. Sec. School **2024**
Higher Secondary (XII) | 85.83% *Chennai, India*

Experience

Infosys Springboard **Jun 2026 – Aug 2026**
*Java Full-Stack Intern | **GitHub*** *Virtual*

- Joined the build of SkillSphere Nexus, an employee skill and learning platform that needed separate **Employee** and **HR** dashboards for tracking skills and courses.
- Built Spring Boot REST APIs across **3 microservices** (**93 endpoints**, **14 entities**) and the **30-page** React frontend, with every endpoint documented in Swagger/OpenAPI.
- After the internship, secured **92 endpoints** with **JWT authentication** and HR/Employee role-based access, and added pagination and database indexes.
- Delivered all **4 milestones** on plan, with **58 passing automated tests** and local API responses of **11 to 30 ms**, and earned the internship certificate.

Projects

Recover Mandate | *Java, Spring Boot, React, PostgreSQL, Gemini* | GitHub | Live Demo **2026**

- Failed recurring payments (mandates) on Indian banking rails need recovery without ever charging a customer twice.
- Designed and built the platform end to end: a React (Vite) dashboard and Spring Boot backend on PostgreSQL, deployed on Vercel, Render and Supabase.
- Added **HMAC-SHA256** webhook verification, retry scheduling, payment links and live **Server-Sent Events**; Gemini-drafted recovery emails go through human approval and a **Resilience4j** circuit breaker.
- Fixed a **double-charge race** between auto-retry and payment links, added a **SHA-256 hash-chained audit trail**, and verified it with **241 passing automated tests**.

ShiftGuard (Workforce Scheduler) | *Java, Spring Boot, React, Zoho Catalyst* | GitHub | Live Demo **2026**

- Manual shift scheduling is error-prone when rest gaps, weekly hour limits and availability must all be respected.
- Built a Spring Boot and React system that generates weekly employee schedules within labor rules.
- Implemented a scheduling algorithm enforcing **4 constraints** (overlap, minimum rest, weekly-hour limit, availability) and deployed it on **Zoho Catalyst**.
- Generated **conflict-free schedules** for **12 employees** across **26 shifts** with **zero rule violations**.

Technical Skills

Languages: Java (primary), SQL, JavaScript, HTML, CSS; basic Python, C++

Frameworks and Databases: Spring Boot, Spring Security (JWT), Resilience4j, React, Vite; PostgreSQL, H2

Developer Tools: Git, GitHub, Maven, JUnit 5, Postman, Swagger/OpenAPI, IntelliJ IDEA

Cloud and Deployment: Oracle Cloud Infrastructure (OCI), Vercel, Render, Supabase, Zoho Catalyst

Achievements and Certifications

- Cleared **3 selection rounds** at **Razorpay AI Builderthon 2026** with an AI-driven fintech solution.
- Selected for the **RHP** program, a special training for the **top 30 coders** at R.M.D. Engineering College.
- Certified **OCI Generative AI Professional** and **OCI AI Foundations Associate** (Oracle Cloud Infrastructure).
